

Partnership for Clean Indoor Air

Stove Design and Performance Workshop Bangladesh

Day 1

What did we learn yesterday?

- What the WBT is, and its limitations
- How to perform the WBT

What did we learn yesterday?

- How to enter testing data into WBT Excel spreadsheet
- What the PEMS and IAP meter are and how they work
- More about Aprovecho, history

What new approaches/solutions?

- Some common mistakes and solutions:
 - Fill gap around pot with ash
 - Clean out charcoal between cold and hot starts
 - Start with new wood between cold and hot starts
 - If the grate holes are too big, charcoal will fall through
 - Stoves should be tested with the fuels people will use in them

More observations

- Stove tests were very interesting to passers-by!
